Modification AE 4144 FM from FM only into AM/FM

Disconnect power supply and open cabinet upper and lower parts.

On the front panel PCB You will find jumpers just besides the switches.
There is a jumper named "SCAN" , which is inserted in the FM only version.

Please open this jumper and solder a new jumper into the holes named "AM"

Note: This modification is only legal in countries which allow AM and FM on 40 Channels and where a valid approval has been obtained. In any case, the present approval sticker of the FM CEPT version must be replaced by the appropriate approval sticker for this country.
